## Series description: Wilo-Rexa PRO

### Design

Submersible sewage pump for permanent operation, completely of cast iron

### Application

For pumping in permanent operation of:

- Waste water and sewage
- Waste water containing faeces
- Sludges up to maximum 8% dry matter (depending on the selected hydraulics)

out of sumps and vessels in municipal and industrial applications as well as to domestic and site drainage in accordance with EN 12050 (observing regional-specific regulations and instructions).

### Type key

<b>E</b>	E = dry motor R = reduced-power motor
<b>A</b>	Material version, motor A = standard version
<b>D</b>	Seal with two independent mechanical shaft seals
<b>1</b>	IE efficiency class, e.g. 1 = IE1 (derived from IEC 6003430)

### Equipment/function

- Leakage detection for the motor compartment
- Winding temperature monitoring with bimetal sensor
- Optional external sealing chamber control for the oil barrier chamber

### Description/design

Submersible sewage pump as submersible monobloc unit for stationary and portable wet well installation in permanent operation.

#### Hydraulics

The outlet on the pressure side is designed as horizontal flange connection. The maximum possible dry matter is 8 % (depending on the hydraulics) Vortex impellers are used as the impeller shape.

#### Motor

The motors available are glanded motors in single-phase version (with built-in operation capacitor in external switchgear) and three-phase version for the direct starting. The waste heat is given off directly to the surrounding fluid via the motor housing. These motors can be operated immersed in permanent operation (S1) and non-immersed in short-term operation (S2) or intermittent operation (S3).

Furthermore the motors are equipped with the following monitoring devices:

- Leakage detection motor compartment  
The leakage detection signals water ingress into the motor compartment.
- Thermal motor monitoring  
The thermal motor monitoring protects the motor windings against overheating. Bimetal sensors are used as standard for this.

In addition the motor can be equipped with an external sealing chamber electrode for monitoring the oil barrier chamber. This signals if there is water ingress into the oil barrier chamber through the mechanical seal on the fluid side.

The connecting cable has bare cable ends and a length of 10 m as standard, and is available in following versions:

#### Seal

There is an oil barrier chamber between the motor and hydraulics. This is filled with medicinal white oil. The fluid-side and motor-side seals are provided by two mechanical seals which rotate independently of each other.
